Innovative

With **Philips CoreLine** you get much more than high quality and easy-to-install lighting solutions – you get LED lighting that’s setting **the reference** in the industry. That’s why CoreLine luminaires are the first Interact Ready LED luminaires and work seamlessly with the **intuitive Interact Pro app and dashboard**. It has never been easier to bring the power of connected lighting to small and medium-sized enterprises.

Easy-to-install

The efficient design of the CoreLine fixtures enables replacement of existing lights, with **no need for expensive re-wiring or new ceiling configurations**.

High quality

At the heart of CoreLine’s **high-quality light** is LED technology. Lasting up to 50,000 hours @ L70, its **long lifetime** enables you to meet every demand and provide the best lighting solution for every customer.

Lighting New Zealand for **over 75 years**

The Philips brand stands for quality and energy-efficiency in light. For over 127 years, Philips products have been at the forefront of innovation. As the world's leader in lighting, Philips is driving the switch to energy-efficient and connected lighting solutions.

That same principle has been at work here in **New Zealand for over 75 years**, with thousands of lighting solutions across every sector.

Today, **Philips Lighting** is an integral part of the Kiwi landscape. And just as that landscape is forever changing, so we'll continue to provide the cutting-edge solutions that will take New Zealand industry into the future.

CoreLine Highbay IP65

Instant frustration or easy installation?

Real professionals count on the new **Philips CoreLine Highbay IP65.**

Designed as a replacement for conventional 250 or 400W metal halide luminaires. It comes complete with a Flex and Plug and single point suspension, making connection quick and easy to install. The Highbay also features a new round dedicated optic, providing a softer more natural light.

Key Features and Benefits

- ✓ Strong energy saving credentials – system efficacy @135lm/W.
- ✓ Round exit window design – for easy alignment when installing multiple highbays in a row.
- ✓ Excellent glare control for narrow beam with an additional reflector.
- ✓ High quality aluminium die cast heatsink ensuring a long life in harsh environments.

Applications

- ✓ Warehouses
- ✓ Distribution centres
- ✓ General manufacturing areas
- ✓ Exhibition halls
- ✓ High ceiling applications

CoreLine Highbay IP40

Low achiever or high performer?

Real professionals count on the new Philips CoreLine Highbay IP40.

This replaces traditional Philips 400W metal halide and T5 highbays.

The IP40 CoreLine Highbay has an attractive high quality design with an assortment of different optics including a high rack option. With advanced options, such as a ZigBee Actilume wireless control, system energy savings can reach up to 88% when compared to traditional highbay luminaires.

Key Features and Benefits

- ✓ System efficacy of up to 140lm/W offers up to 73% energy savings compared to traditional HID systems.
- ✓ Three different distributions to precisely illuminate space efficiently.
- ✓ Robust aluminium extrusion body and quality Xitanium drivers ensuring luminaire longevity.

Applications

- ✓ Warehouses
- ✓ Distribution centres
- ✓ General high ceiling applications
- ✓ Factories
- ✓ Production lines
- ✓ Large format retail stores

*Note: All the above options come with a symmetrical wide beam optic. Other options available on request.

Slow business or grow business?

Real professionals boost their business with **Philips CoreLine connected luminaires** that work with the **Interact Pro dashboard and app**.

- ✓ World class connected lighting for small- and medium-sized businesses.
- ✓ Easy to install - no need for separate antennas, radio boxes or signal cables.
- ✓ Speedy set up with the intuitive Interact Pro app.
- ✓ Get invaluable data from the Interact Pro dashboard and become a trusted advisor.
- ✓ Interact Pro seamlessly works with our Interact Ready CoreLine luminaires.

What is **Ingress Protection (IP)** rating?

IP ratings describe the environmental protection that a product has from particles and liquids.

Digit 0
Non protected.

1
Protected against a solid object greater than 50mm, such as a hand.

2
Protected against a solid object greater than 12.5mm, such as a finger.

3
Protected against a solid object greater than 2.5mm, such as a wire.

4
Protected against a solid object greater than 1.0mm, such as a thin strap.

5
Dust protected. Protects ingress of dust sufficient to cause harm.

6
Dust tight. No ingress of dust.

Usage and common application
IP20 – suitable for most indoor applications.
IP44 – suitable for under canopy and bathroom.
IP54 – suitable for under canopy in outdoor areas, industrial application etc.
IP65 – suitable for industrial application and outdoor areas.
IP68 – suitable for underwater and in-ground applications.
The above information serves as a reference only. Always check with product manufacturer for suitability.

Second digit = Protection against liquids (0 – 8)

Digit 0
Non protected.

1
Protected against dripping water.

2
Protected against dripping water when tilted up to 15 degrees.

3
Protected against spraying water at an angle of up to 60 degrees.

4
Protected against splashing water from any direction.

5
Protected against jets of water from any direction.

6
Protected against the effects of temporary immersion. Up to 30mins, between 15cm to 1m.

7
Protected against the effects of temporary immersion in water.

8
Protected against the effects of continuous immersion in water.

What are **IK (Impact Protection)** ratings?

1. 200 g
7.5cm
0.15 joule impact

2. 200 g
10cm
0.20 joule impact

3. 200 g
17.5cm
0.35 joule impact

4. 200 g
25cm
0.5 joule impact

5. 500 g
35cm
0.7 joule impact

6. 500 g
20cm
1 joule impact

7. 5 kg
20cm
2 joule impact

8. 5 kg
10cm
5 joule impact

9. 5 kg
20cm
10 joule impact

10. 10 kg
40cm
20 joule impact

Common LED myths

There are many benefits to using LED lighting, but there are also numerous misconceptions about it. We help to separate the facts from fiction by busting some of the common myths.

Myth 1

LEDs last forever

LEDs have a long source life but they do still slowly fade over time. Ambient temperatures, electrical drive currents, and the effectiveness of cooling systems are all factors that contribute to this phenomenon called lumen depreciation. While LEDs typically do not catastrophically fail, lumen depreciation is a critical factor in determining useful lifetimes.

Philips designs our white light LED products to sustain 70% of initial lumen output (L70).

Myth 2

White LEDs produce over 180 lumens per watt

These results are often obtained in labs where LED chips are tested at room temperature conditions with short “pulse” tests that produce a high lumen output. While the results are not necessarily “wrong,” they do not reflect the typical expected output of LEDs in practical use. When used in lighting fixtures, LED output often decrease by 30–40%.

Philips does not use raw LED specifications or “instant on” output testing. Instead, we use independent testing labs to validate the output of our fixtures at constant, realistic thermally-stable operating temperatures in rated, ambient environments.

Myth 3

3 Watt LEDs are brighter than 1 Watt LEDs

The wattage of a LED is not directly comparable to the wattage of a traditional light source or even from one LED to another. Two different LEDs can consume the same power but differ noticeably in light output. Thus, when selecting LEDs or LED fixtures, it is more about a quality and consistent light output rather than absolute power.

Philips develops solutions based on the light output, distribution and quality needed for the application and not based on the particular wattage of LEDs.

Myth 4

LED light quality is poor

The Colour Rendering Index (CRI) is the prevalent method used to judge light quality, though there are known deficiencies and limitations associated with it, especially for LED-based light sources. Research in at least one study found participants preferring LED sources over halogen and incandescent because of overall colour appearance, not a CRI value. The International Commission on Illumination (CIE) has proposed a new metric called Colour Quality Scale (CQS), which will incorporate colour rendering, chromatic discrimination and observer preferences into the measure of Colour Quality.

Philips works to design high quality and consistent light output. We measure our colour consistency in SDCM (Standard Deviation of Colour Matching).

Myth 5

LEDs generate no heat

When used in lighting applications, LEDs do not radiate infrared heat, only visible light. However, waste heat is produced during the conversion of electricity into light. If not properly removed from the lighting system, this may potentially damage the LEDs. Heat removal can be accomplished through heat sinks that draws heat away from the LED and dissipate it into the surrounding air.

Philips designs, simulates and tests our products for high thermal efficiency to ensure optimal performance and maximise the lifetime of our LEDs.

Myth 6

LEDs are not resistant to vibration

There are no moving parts, filaments or fragile glass enclosures with LED lighting. LEDs are therefore very suitable for use in a wide range of applications.

Philips designs products that must pass vibration tests according to IEC standards. In some cases, we use military standards for higher grade of assurance.

Myth 7

LED systems cost too much

The initial investment of LED systems is higher than that of conventional systems, but due to the long life of the LED and energy savings ranging between 50%–70% compared to conventional light sources, the economic payback can typically be seen in less than two years. Additionally, the upfront cost of LED systems is also dropping rapidly.

Philips provides cost-effective solutions that have a proven and compelling return on investment (ROI).

Myth 8

LEDs are not bright enough

LED traffic lights are already common and are certainly a sign that LEDs are bright enough to be seen even in daylight. Outdoor roads, tunnels and entire building façades are being lit entirely with LEDs today. By any measure, LEDs have enough light output for use even in very large outdoor daylight-visible installations.

Philips products have been used in more than 20,000 installations worldwide, including large exterior projects such as the Stamford Bridge Stadium (Chelsea Football Club), Al Saad Stadium (Doha, Qatar) and Federal Highway (Malaysia).

Myth 9

LED lights are dangerous to our eyes

There is a small amount of blue light generated by LED but it is a tiny fraction of the emissions from natural daylight, and similar to emissions from other artificial light sources like incandescent, halogen and energy savers or fluorescent lamps. Typical daily exposure to natural blue light is at least 1,000 times stronger compared to artificial light indoors

Philips LED products comply with all the relevant regulations and legislation, ensuring products are safe to use. This means that being exposed to a LED light is as safe as being exposed to any other artificial light source, and safer than being exposed to natural lighting conditions – such as walking in the open air.

Real Pros, Real Quality

When you need to get the job done right, you can count on Philips LED technology. With the widest range of LED lamps, fixtures and controls, we can satisfy every customer need.

LED technologies are rapidly changing, creating plenty of new opportunities. As a trusted name in lighting, we understand your challenges and can help you build your business.

You're no handyman – you're a real professional. Someone who can be relied on to get the job done. Someone who plans well, executes fast and works efficiently. Real professionals count on Philips Lighting.
