

Three ways efficient connected LED lighting

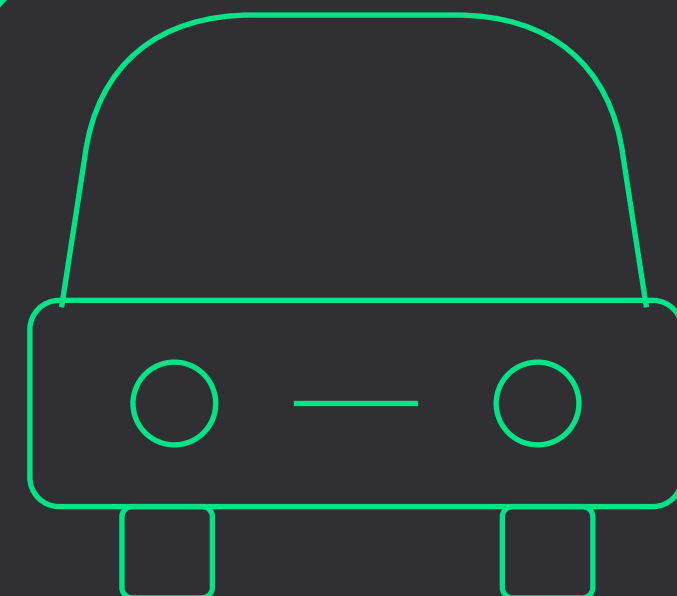

delivers less costs,
more efficiency, and
reduced emissions

Boosts city-wide energy efficiency

Efficient connected LED
lighting can save a city with
1.25 million people up to

205 GWh
of electricity annually.

That's enough
to charge over

580

**electric cars for
100 years of driving.**

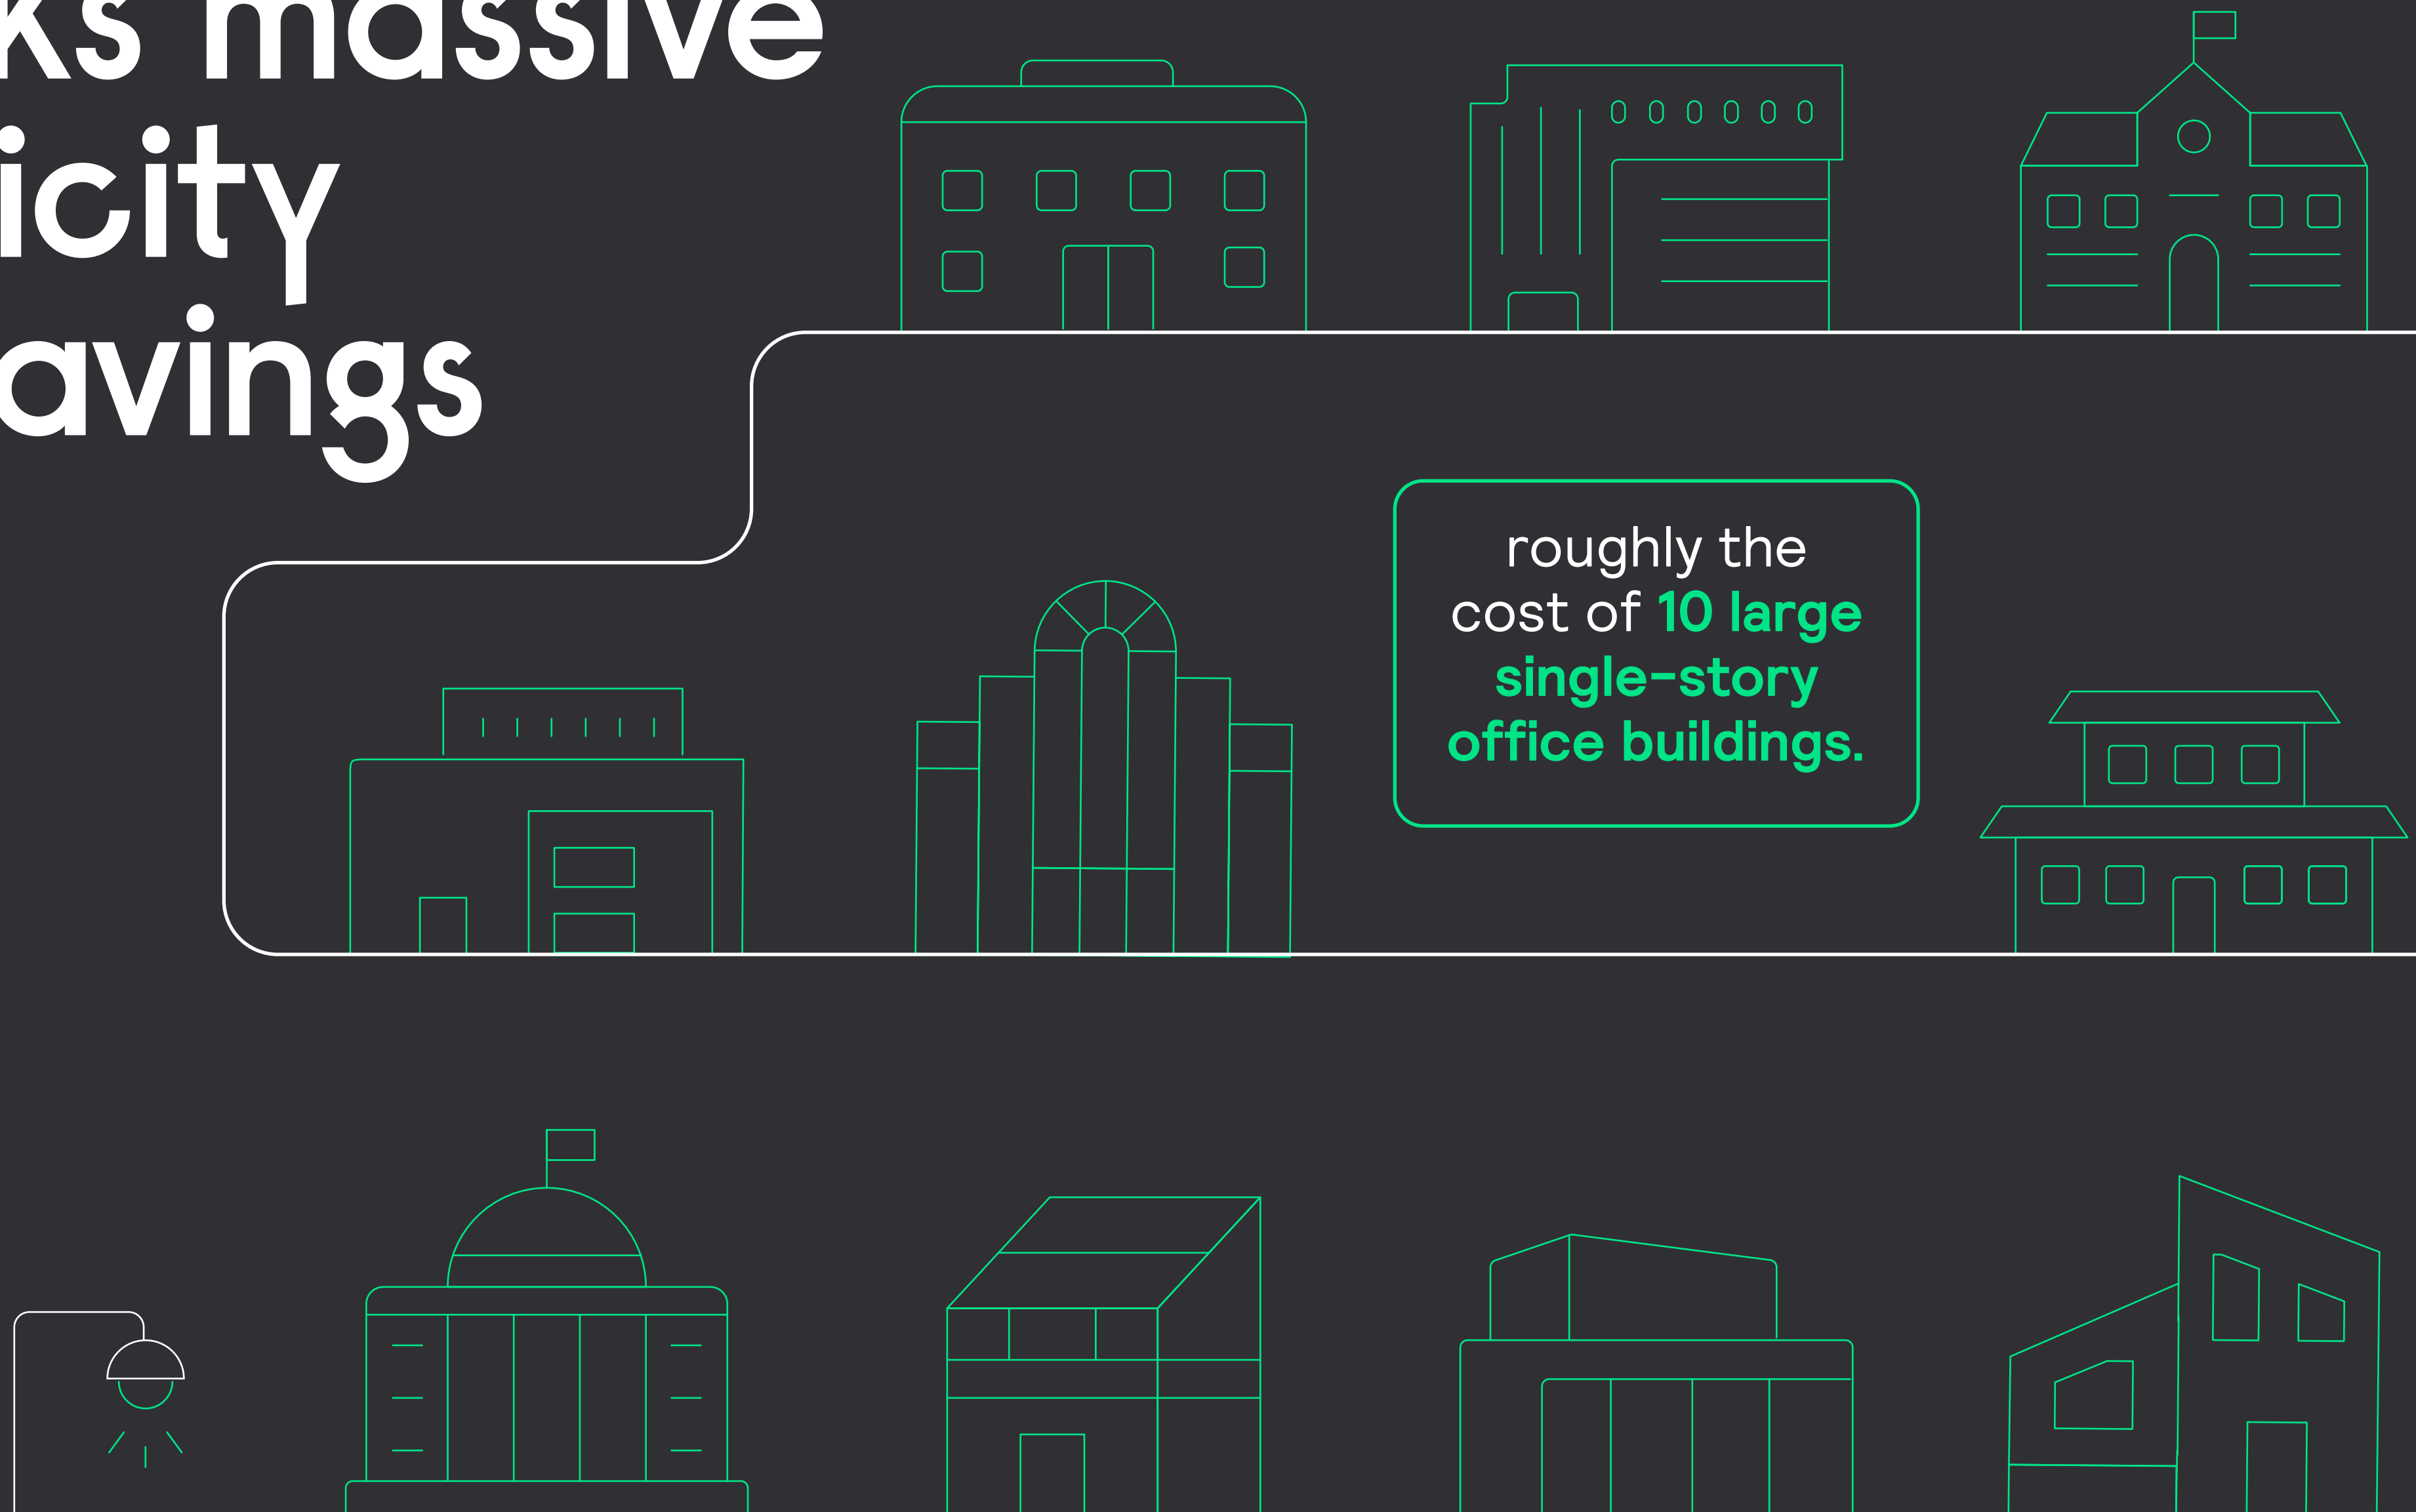

Unlocks massive electricity cost savings

That same city can also save up to

€49.7M

annually by switching to efficient connected LED lighting

roughly the cost of **10 large single-story office buildings.**

Reduces Emissions

Efficient connected LED lighting can help the city reduce up to

67,900 tons

of CO₂ annually,
