

A simple solution for replacement LED drivers

Advance Express Makes It Easy!

The Advance Express Program offers a simple and fast solution for replacing drivers in existing indoor, outdoor, and downlight LED fixtures. Eleven recommended SKUs will replace an estimated 80% of commercial lighting driver applications. Additional SKU's to cover less common application such as 347V, 480V, and niche current/voltage combinations are also available.

Here's How It Works:

- Locate the two labels on the failed driver. They can provide all the information you will need to identify the replacement driver.
- Order the replacement driver. See recommended SKUs on next page.
- Read and configure the driver using the wireless programming tool or the MultiOne Mobile App. See next page.
- Label the new driver with the programmed current to enable future maintenance.
- Install the driver.
