

# Sofistikerede, men enkle, energibesparende løsninger til lysstyring

## Dynalite Multipurpose Controllers

Et projekt kan kræve mange forskellige belysningsbelastninger for at opnå det ønskede resultat. Hver af disse belysningsbelastninger har oftest sit eget lysstyringssystem. Dynalite-serien af universalcontrollere gør det muligt at tilpasse lysudbyttetypen vha. forskellige modulenheder. En universalcontroller med DIN-skinne giver mulighed for at vælge et lysstyringssystem for hvert kredsløb: relæ, forflankelysdæmper, bagflankelysdæmper, driverstyring, controller med "køreklare" funktioner, blæser- og persienne/skærmstyring. Uanset kombinationen kan flere lysbelastninger styres med samme enhed. Dette giver en problemfri installation og forhindrer spildt kapacitet i form af unødvendige kredsløb.

### Fordele

- Controllere understøtter distribueret intelligens, dvs. hver enhed har en CPU med forudindstillinger og kan fungere som separat styreenhed
- Nogle enheder har out-of-the-box-funktioner med mulighed for rekonfiguration
- Forenklede netværksmeddelelser og indkøringsproces

### Anvendelsesområder

- Detailhandel, samt hotel og restaurant, kontor og industri
- Offentlige områder, stadioner og aktivitetscentre
- Boligområder
