Sophisticated yet simple energy-efficient lighting solutions

Dynalite System Integration

Within any modern project, many third-party systems can be found performing different roles. Each separate system may use a different protocol for communication. Philips Dynalite has developed a range of gateway devices that can be used to synchronize these systems' functions into one integrated system solution. By utilizing the correct gateway, different systems can be integrated, allowing end-users access to a fully automated site from one interface. By successfully integrating third-party systems with a Dynalite solution, repetitive end-user interaction is reduced.

Benefits
· Reduces repetitive end-user interaction
· Allows access to fully automated site from one interface

Features
· A range of different gateways provides different integration opportunities and network management options

Application
· Depends on the lighting system in which the controls are used

Dynalite System Integration

Versions

PDEG
