### Designed to be seen, looks good on and off

- Looks good on and off

# Highlights

## No visible flicker

When your light flickers in quick succession it could be hard on the eyes, cause headaches, and even set off an attack for those with photosensitive epilepsy. It's both unpleasant and unnecessary. LEDs can flicker because of their rapid response to the driver current. However, because Philips LEDs are designed so that variations in your driver current's output are minimized, they eliminate the factors that cause flicker. So, you won't see it, not even a hint.

## Replaces globe incandescent

With its beautifully shaped design and familiar dimensions, this is a contemporary lighting LED globe. The perfect sustainable replacement for traditional incandescent globes.

## Designed for the comfort of your eyes

It's easy to see how harsh lighting can strain the eyes. Too bright, and you get glare. Too soft and you experience flicker. Now you can gently light up your world with LEDs designed to go easy on the eyes, and create the perfect ambience for your home.

## Looks good on and off

"These beautiful lamp with visible filament add a sense of style and nostalgia to any room. Looks good on and off."
