

Can my Philips Hue light play effects?

Once effects are available in the Hue app, the easiest way to find out if your light can play effects is to open the light in the app and tap the effects icon (three stars). If you can play the effect, your light is compatible.

If you haven't added the light to your Hue app, search for its product code in the list below. The listed lights work with effects.

There are two ways you can find the product code for your light:

1 On the product itself

Find the 10-digit code on your light. This number is usually on the base of a bulb or the back of a lamp.

2 On the product's packaging

Find the 12-digit code on the light's packaging, starting with 91 or 92. This number is usually above the barcode. Do not include the last two digits of this code before searching below. If you don't see the 12-digit code, look for the code that begins with "ART."

Tip: Use *CTRL + F* (PC) or *CMD + F* (Mac) to search the list.
