Pure protection
Working together to deliver cleaner water and air, today and tomorrow
Use the power of UV-C light for pure protection against viruses and bacteria.
Every day the air we breathe, the surfaces we touch, and the water we use can affect our health and wellbeing. Because bacteria and viruses that are left behind after routine cleaning can spread the risks and dangers of infections and disease. Philips UV-C lamps have the power to inactivate the DNA and RNA of micro-organisms, rendering them harmless. So together we can be sure it's pure.

**Pure protection**

**Partnership**
We offer equipment manufacturers and purification companies the state-of-the-art UV-C solutions they need to remain competitive. But our expertise goes far beyond innovative products. We also have a proven track record in UV-C technologies and offer solid development support, including microbiological performance testing. A level of service and support that sets industry standards.

We’re also naturally inquisitive and love working with others to refine our ideas. We go out of our way to understand each application, immersing ourselves in the details to make sure that our UV-C solutions do exactly what you expect them to do for your equipment. In fact, we’re the only manufacturer to have developed a complete package of UV-C lamps, drivers and modules in close co-operation with our partners. We’re also pioneering the introduction of UV-C LED solutions for equipment manufacturers that will revolutionize the industry. So together we can be sure it’s pure, today and tomorrow.

**Sustainability**
The environment matters to us too. We’re leading the way in caring for our planet with innovative lamp systems that maximize quality of life and minimize environmental impact:

- A lack of safe water supply contributes to around 80% of diseases and deaths in the developing world. Our UV-C lamps help provide clean drinking water in a cost effective way.
- Our UV-C lamps can be used in a large variety of air disinfection systems for consumer and professional use, including in-duct systems, upper air luminaires and free standing luminaires.
- Bacteria and viruses that cause infections can live on plastic and steel surfaces for up to 3 days. With our UV-C lamps you can disinfect surfaces overnight or when no one is present. Also they can be used in germicidal chambers or cabinets to disinfect objects.
- We contribute to create a better environment by substituting potentially dangerous chemicals in our UV-C solutions.
- Our products also contain industry-leading low amounts of mercury, have a long lifetime to reduce waste and a high efficacy to reduce energy use.

**Innovation**
Innovation is at the heart of everything we do. Our comprehensive portfolio of UV-C lamp and driver systems offers the next generation of innovation that improves lives. To achieve the best performance from disinfection installations, we also optimize the delicate balance between lamp and driver and test them thoroughly to ensure the ultimate in quality, reliability and performance.

**Defeats micro-organisms**
Proven effective against viruses, bacteria, molds and spores.

**Reliable disinfection**
Disinfection effect is directly related to UV dose (intensity and exposure time of micro-organisms). It’s simple to measure effectiveness once system design is validated.

**Protects against**
Micro-organism growth keeps the surface of water reservoirs clean from biofilm. Keeps our treatment systems clean.

**Easy and cost-effective**
UV-C installations have low capital and operation costs and are easy to operate and maintain.
Integrated UV modules

In addition to our extensive range of individual UV lamps and drivers for water and air purification systems, we offer integrated UV-C modules on a project by project basis.

Philips products have a strong reputation for high quality, providing end users with disinfection equipment that they can rely on to remain competitive. It’s something we’re committed to maintaining. That’s why we have developed the YourSource and the customized cap features. The objective? Helping you to secure maximum disinfection performance, today and tomorrow.

Application and technological expertise
We have a proven track record in UV and UV-C technologies. We’re also the No 1 sold LED lighting. Thanks to our deep understanding of the complex factors that need to be taken into account for water and air purification (including quality of the water, water flow and water temperature), we’re a partner you can trust to design UV-C models that are optimized for your application. To learn more about how our integrated modules could benefit you, go to www.philips.com/uv-c

YourSource
Customized, integrated module
Our YourSource UV-C model with integrated driver is available in wattages of between 5W and 40W to suit the needs of your application and can be customized to your equipment. As a result, it provides a seamless fit, both in terms of ergonomics and functionality. The end user can always be confident of the correct performance of the UV-C Module, because it can only be replaced by the original lamp the system has been designed for. A safety switch avoids exposure to UV-C.

Customized caps
We can provide our lamps with a special customized cap, which allows for easy replacements and more after-sale control. The customized cap reassures equipment manufacturers that only the original lamp can be installed in their original equipment.

Customized products are also available on request. Simply contact us with your requirements to find out what’s possible.
Compact and miniature mercury lamps
Residential water, air and surface treatment

The quality of the air we breathe and the water we drink has a profound effect on our health and well-being.

Many people do not have access to clean drinking water. Impure or contaminated drinking water can cause a range of diseases from typhoid and cholera to gastroenteritis and hepatitis A.

Households can purify their water by installing UV-C water purification systems at the point of entry in the home, at the point of use (such as the kitchen sink) or via separate purifiers. Combined with a filter to remove suspended particulates or organic materials, the result is clean water.

Next to that, many households are troubled with harmful germs that float through the air, such as the flu and pneumonia. These can be rendered harmless through air purifiers equipped with Philips UV-C lamp systems. As a result, illnesses that are easily transmitted via the air are minimized and the overall air quality is improved.
Philips TUV PL-S

Philips TUV PL-S lamps are compact UV-C (germicidal) lamps used in residential water and air disinfection units, as well as for specific surface treatment applications. The compact size of the lamp allows for a small system design and design flexibility. Philips TUV PL-S lamps offer almost constant UV-C output over their complete lifetime. Thanks to the single-ended lamp base, lamp replacement is easy.

Main applications
- Deactivation of bacteria, viruses and other micro-organisms
- Residential drinking water units
- Pond water units
- Air treatment units
- Stand-alone purifiers

Features
- Short-wave UV-C radiation with a peak at 253.7 nm (UVC) for disinfection purposes
- Protective inside coating ensures almost constant UV-C output over the complete lifetime of the lamp
- Special lamp glass filters out the 185 nm ozone-forming radiation
- 2-Pin PL-S lamp base contains a special starter for almost instant starting on electromagnetic drivers
- 4-Pin PL-S lamps are designed for use on electronic drivers

Benefits
- Compact system design
- Simple single-ended connection
- Effective disinfection over the useful lifetime of the lamp
- Good environmental choice because of lowest amount of mercury

Philips TUV TL Mini lamps are slim double-ended UV-C (germicidal) lamps used in residential water and air disinfection units, as well as for specific surface treatment applications. The small 16 mm diameter of the lamp allows for a small system design and design flexibility. Philips TUV TL Mini lamps offer almost constant UV-C output over their complete lifetime.

### Features
- Short-wave UV-C radiation with a peak at 253.7 nm (UV-C) for disinfection purposes
- Protective inside coating ensures almost constant UV-C output over the complete lifetime of the lamp
- Special lamp glass filters out the 185 nm ozone-forming radiation

### Benefits
- Slim system design
- Simple single-ended connection
- Large range of High Output versions available for optimum UV-C output per lamp length, allowing for reduction of system size
- Effective disinfection over the useful lifetime of the lamp
- Good environmental choice because of lowest amount of mercury

### Main applications
- Deactivation of bacteria, viruses and other micro-organisms
- Residential drinking water units
- Fish pond water units
- Stand alone air purifiers

Every government aims to provide its citizens with safe and clean drinking water.

If they can deactivate the micro-organisms in water cost-effectively by avoiding, or reducing, the use of chlorine, all the better. We are helping to do just that with a range of lamp systems designed to meet all the main municipal requirements and comply with new legislation.

Waste water must also be disinfected before it is discharged into the environment. Not only does this minimize the risk to the local population, it also helps to protect vulnerable natural ecosystems in the discharge areas. Here too, our UV-C lamp systems are becoming increasingly popular.

Highly cost-effective, they treat waste water without adding chemicals or residues. Safeguarding our communities and the environment.
Philips TUV Amalgam XPT System

Philips TUV Amalgam XPT system consists of an electronic driver that operates one TUV Amalgam XPT lamp, mounted in a sleeve. The electrical specifications are tailored to the lamp, ensuring an optimized performance of the Philips TUV Amalgam XPT system. Thanks to extensive testing before a lamp system is released, we can ensure maximum reliability and long lifetime. These lamps should always be designed-in with support of the Signify organization, this to prevent performance issues. Please contact your sales representative.

Main applications
- Deactivation of bacteria, viruses and other micro-organisms
- Municipal drinking water treatment equipment
- Municipal waste water treatment equipment
- Process water treatment equipment
- Swimming pool units
- Equipment for the production of ultra-pure water, for example for the semiconductor, pharmaceuticals and cosmetics industries (ozone version)

Features
- Short-wave UV-C radiation with a peak at 253.7 nm (UV-C) for disinfection
- Special amalgam used for highest efficiency over wide temperature range
- Protective inside coating ensures constant UV-C output over the complete lifetime of the lamp
- Special lamp glass filters out the 185 nm ozone-forming radiation
- Philips electronic driver available for a perfect interface
- Universal burning position possible depending on the application
- Lamp can be made from special quartz (open / synthetic) to maximize 185 nm Ozone generation

Benefits
- High Power allows for design of compact installations
- High system efficiency
- Approximately 10% energy savings, because lamps can be dimmed to reach the same UV output compared to similar lamps on the market
- Effective disinfection over the useful lifetime of the lamp
- Best environmental choice because of long reliable life, less waste and industry leading low amount of mercury
- Extreme reliability of driver, with annual failure rate of less than 1%
- High efficiency during dimming thanks to unique amalgam temperature control of the 800W lamps

The Philips DynaPower lamp and driver offers you a best-in-class, no-risk alternative for specific amalgam open channel systems. The delicate balance between lamp and driver has been optimized to achieve the best possible performance. The Philips lamps and drivers are all designed and manufactured in-house, to give you guaranteed peace of mind. These lamps should always be designed-in with support of the Signify organization, to prevent performance issues. Please contact your sales representative

Features
- Operates 230W, 260W (HO) and 335W (HO) TUV Amalgam XPT lamps
- Single lamp operation possible
- Cooler operating temperature for additional energy savings
- 100% stress testing minimizing 0-hour failures
- Protection against voltage peaks
- Permanent overvoltage protection
- Approximately 20 seconds start-up time (compared with 90 seconds for similar drivers on the market)
- Special lamp glass filters out the 185 nm ozone-forming radiation

Benefits
- Energy savings of approximately 10% compared with similar drivers or lamps, and up to as much as a 35% for the HO system
- Dimmable up to 60% power level for additional energy savings
- The highest levels of service and support with a single supplier for lamp and driver
- 3-year guarantee on driver and 16,000 operating hours guarantee on lamp
- Easier maintenance thanks to single lamp operation, allowing to detect easily which lamps need to be replaced
- Best environmental choice thanks to maximum lifetime reliability, in combination with minimum substances, packaging and product weight
- Easier to maintain compliance with regulations thanks to reduced risk of failures

Main applications
- Deactivation of bacteria, viruses and other micro-organisms
- Municipal drinking water treatment equipment
- Municipal waste water treatment equipment
- Process water treatment equipment

Technical data
Philips TUV T5

TUV T5 lamps are single- or double-ended UVC (germicidal) lamps used in professional water and air disinfection units. The small 16 mm diameter of the lamp allows for a small system design and design flexibility. TUV T5 lamps offer almost constant UV output over their complete lifetime.

Main applications:
- Deactivation of bacteria, viruses and other micro-organisms
- Industrial water disinfection equipment, e.g., for food & beverage industry
- Small municipal water treatment systems
- Swimming pool units
- Air treatment systems (High Output lamp versions)

Features
- Short-wave UV-C radiation with a peak at 253.7 nm (UV-C) for disinfection
- Small diameter
- Protective inside coating ensures almost constant UV-C output over the complete lifetime of the lamp
- Special lamp glass filters out the 185 nm ozone-forming radiation

Benefits
- Slim system design
- Simple single- and double-ended connection
- High Output versions for improved performance in moving air and reducing amount of required lamps
- Effective disinfection over the useful lifetime of the lamp
- Good environmental choice because of lowest amount of mercury

Customized products with lamp type, caps, dimensions and power are possible upon request. Please contact us with your requirements.
Increasingly, we spend more time indoors, for example at work, in airplanes, schools and shopping malls. The air we breathe in these environments is anything but clean. In fact, it’s often re-circulated along with all the bacteria, viruses, pollen, smoke and toxic gases that are trapped along with it.

Philips UV-C disinfection lamp systems provide a safe, reliable and sustainable solution. That are ideal for use in ventilation air ducts, air disinfection units or stand-alone air purifiers.

These types of UV-C disinfection lamps can also be used in medical chambers and cabinets, moveable carts, robots and open luminaires. They help protect against airborne pathogens, creating a safer and healthier indoor environment with the power of light.

They help protect against airborne pathogens as well as micro-organisms present on surfaces.

Medium power compact and tubular mercury lamps
Commercial and professional water, air and surface treatment
Philips TUV PL-L

Philips TUV PL-L lamps are compact UV-C (germicidal) lamps used in water and air disinfection units. The compact size of the lamp allows for a small system design and design flexibility. Philips TUV PL-L lamps offer almost constant UV-C output over their complete lifetime. Thanks to the single-ended lamp base, lamp replacement is easy, making maintenance hassle free.

Main applications:
- Deactivation of bacteria, viruses and other micro-organisms
- Air disinfection systems in for example hospitals, universities and laboratories
- In-duct air treatment units
- Stand alone air purifiers
- Residential drinking water units
- Fish pond and process water units

Features
- Short-wave UV-C radiation with a peak at 253.7 nm (UV-C) for disinfection purposes
- Protective inside coating ensures almost constant UV-C output over the complete lifetime of the lamp
- Special lamp glass filters out the 185 nm ozone-forming radiation

Benefits
- Compact system design
- Simple single-ended connection
- High Output versions for improved performance in moving air and reducing amount of required lamps
- Effective disinfection over the useful lifetime of the lamp
- Good environmental choice because of lowest amount of mercury

Compact design
Simple single-ended connection
High output versions available

Dimensions (mm)
Philips TUV T8

TUV T8 lamps are double-ended UV-C (germicidal) lamps used in professional air disinfection units. TUV T8 lamps offer almost constant UV output over their complete lifetime. Moreover, they have a long and reliable lifetime, which allows maintenance to be planned for in advance.

Main applications:
- Air disinfection systems in professional applications such as universities, hospitals, jails and laboratories
- Upper air and whole room disinfection equipment in hospitals, intensive care units and surgery rooms
- Areas with low maintenance and/or disruptive costs
- Fish ponds and process water units

Features
- Short-wave UV-C radiation with a peak at 253.7 nm (UV-C) for disinfection purposes
- Protective inside coating ensures constant UV-C output over the complete lifetime of the lamp
- Long lifetime of 18,000 hours*
- High reliability with the lowest percentage of lamps that fail prematurely in the market (90% of all lamps still operate on full output and quality after 15,000 hours*)
- Special lamp glass filters out the 185 nm ozone-forming radiation

Benefits
- Effective disinfection over the useful lifetime of the lamp
- Maintenance can be planned in advance, virtually eliminating the need for expensive spot replacement of prematurely failed lamps
- High Output versions available for optimum UV-C output per lamp length, allowing for reduction of system size
- Good environmental choice because of lowest amount of mercury

* based on operation on a Philips electronic driver
1. UV-C radiation is harmful for eyes and skin, therefore people and animals should always avoid direct exposure to UV-C. When installing the lamps make sure the installation manual of the device is followed and lamps are not switched on during installation. All Philips TUV lamps have warning text and signs on the boxes and individual packaging.

2. Materials that are exposed to UV-C and/or ozone for a long time may become damaged and/or discolored.

3. Our UV-C sources are not intended and shall not be used in applications or activities which may cause death, personal injury and/or damage to the environment.

5. UV-C irradiance levels: add irradiance levels at distance of 200mm (calculation in the UV-C guideline document).

In addition to the warnings, there shall be instructions for the safe use during assembly, installation, maintenance and disposal in the document. For Lamps (mercury containing) following should be added in the instructions/user manual.

System Disposal
We recommend that the Philips TUV lamps are disposed of in an appropriate way at the end of their (economic) lifetime. These lamps contain Mercury (Hg), necessary for the performance of these lamps. Therefore these lamps should be treated as special waste and be disposed of in accordance with local regulations.

Information for Businesses and Industries
Under the Resource Conservation and Recovery Act, some widely generated hazardous wastes, including mercury-containing wastes like mercury-containing bulbs, certain spent batteries, thermostats, barometers, manometers, temperature and pressure gauges, and certain switches, are designated as “universal wastes.” Businesses and industries that qualify as universal waste handlers must follow specific requirements for storing, transporting, and disposing of these wastes. Households are exempt from these regulations.

Note that some states and local jurisdictions have elected to pass regulations that are more stringent than the federal hazardous waste regulations. Several states and municipalities do not recognize the exemption for households, others regulate all fluorescent bulbs as hazardous, regardless of their mercury content. For example, Vermont bans all mercury-containing waste from landfills, including mercury-containing waste generated by households.

Safe Use instructions how to handle a broken bulb:
1. Evacuate people and animals from the room.
2. Ventilate the room for at least 15 minutes prior to starting the clean up.
3. Wear personal protective equipment such as (disposable) gloves, safety glasses.
4. Collect the broken pieces and debris with two pieces of stiff paper or cardboard.
5. Use sticky tape to pick up any remaining fine glass or powder.
6. Clean the area after collecting the debris with a damp cloth or towel to remove any residual particles.
7. Collect all the pieces and debris in a sealable container (glass) and dispose of as special waste.
