## Meet <br> Maxos fusion

Adaptable LED trunking system where quality, performance and flexibility meet

(3)

High quality of light, excellent uniformity and color consistency
Maxos fusion offers multiple flux/beam and color choices, plus a portfolio of specially-designed OptiSuit lenses for unmatched performance with visibly superior quality of light.

## Ready to connect

Dedicated sensor units enable you to take full advantage of Interact system propositions so you can make data-driven decisions in retail and industrial applications.

Freedom to position and reposition
Maxos fusion rail is the flexible, future-proof trunk that underpins the system. Positioning freedom makes it easy to upgrade/add/change components on the rail to extend the life of the backbone.

High efficiency and long life
With very high efficacy options (up to 185 Im/W) and very long lumen maintenance (100,000 hours @L85), designers can create optimized, bespoke solutions with an attractive total cost of ownership.

## Covers extensive applications

The ideal choice for a wide range of applications and lighting requirements from retail supermarkets and hypermarkets, to industry production floors and distribution centers and warehouses.

## A solution for all

Maxos fusion rail accommodates up to 13 wires in the trunk, so it can handle a wide variety of electrical circuit options, including emergency lighting to fit specific project demands.

# The right light 

In addition to helping you save on energy costs and improve sustainability, Maxos fusion gives you the power to design a store concept with a customizable ambience. Use the Maxos fusion trunking system as the flexible backbone enabling you to efficiently adapt to new store layouts or trends.

## Trunking

for your applications

## Flexible layouts

The adaptable new lighting system is fast to install, reposition and maintain. You have the freedom to click the lighting unit along the line so it can be easily positioned and re-configured.

## Merchandise sparkles

Our new range of optics has been specially designed to create beautiful ambiences in retail environments. The pleasant, diffuse light makes all the merchandise on display sparkle. Maxos fusion panels with Premium White 930 bring out the best in every color and texture to further enhance your store merchandise, complementing the store experience and ensuring shoppers stay longer. Maxos fusion provides comfortable light that is easy on the eye.

## Future proof

Maxos fusion luminaires are connected. As the Internet of Things becomes an integral part of the retail experience, they are ready to collect data and can use the infrastructure to send data - even to your shoppers. The trunking is ready to be connected to an Interact connected lighting management system for advanced scene management and maximized energy and cost savings. Interact indoor navigation creates a kind of indoor GPS, enhancing the shopping experience.

# The right light for industrial applications 

Creating a safe environment is the first priority for industrial spaces. Now you can comply with industry regulations at the same time as maximizing the value of your investment with Maxos fusion.

## Food production

Maxos fusion complies with international food safety standards:

- Particles can't fall out of the Maxos fusion trunking and dust and moisture will not accumulate in the lighting unit, maintaining hygienic conditions.
- No loose components and no glass in the lighting installation for optimized food safety.
- Reduced power load compared to traditional systems (up to a factor of 2.5) ensures food production processes are not influenced by the lighting installation.
- Easy to clean lighting equipment.

## Automotive

- Flexibility is key in the automotive industry. If the assembly line needs to be rearranged, Maxos fusion lighting can be adapted quickly.
- Maxos fusion prevents glare, helping to increase employee productivity and job satisfaction.
- Impact resistance and dust/water tightness are required on assembly lines. The optional IP54 solution combines both, resulting in a sturdy and reliable lighting solution.

## Trunking

for your
applications

## Excellent TCO

If you're looking for a general lighting solution with excellent performance, Maxos fusion offers a high level of energy savings and minimum maintenance costs over a long and reliable lifetime.

## Comply with regulations

Maxos fusion offers an extensive range of options to meet diverse industry application lighting requirements such as standard \& emergency lighting, applications needing higher IP ratings (IP54). Maxos fusion is fully approbated with the relevant industry safety norms providing for a compliant lighting system.

## Quality of light

Unlike conventional fluorescent installations, Maxos fusion provides outstanding quality of light. The light distribution is highly uniform without artefacts. And thanks to the wide variety of optics you can direct the light to precisely where it is required.

## Freedom of positioning

This adaptable lighting system is fast to install and easy to reposition and maintain. You have full freedom to click the lighting unit along the line, resulting in reduced downtime and the costs associated with layout changes. With up to 13 wires, it can also handle all emergency lighting schemes.

## Interact Ready

Maxos fusion is Interact Ready. By combining Maxos fusion luminaires with various kinds of sensors and the Interact lighting management software, you can define lighting zones, create dimming schedules, and implement other measures that optimize system energy savings.

## Warehouse and logistics

- Maxos fusion is silicone free, meeting specific requirements of the automotive industry and preventing issues in surface coating processes.
- Maxos fusion offers a high degree of
flexibility to mount and reposition luminaires anywhere along the line.
This accommodates tenant changes
or change in usage very easily.
- Appropriate optics for areas with very high ceilings and narrow aisles provides the right lighting for employees and creates excellent visibility, and a safe environment in any type of warehouse.

# OptiSuit, a superior lighting choice <br>  

> Specifying the right lighting for retail and industry requires finding the right balance between efficiency, performance, energy savings and safety. But in order to make a fully-informed lighting decision, you must also consider the quality of light, its color consistency and uniformity.

> Why? Because these qualitative aspects bring different advantages to different applications. In retail environments, lighting creates attractive stores where people like to shop. In industrial settings, lighting enhances visual acuity, providing the right illumination to keep productivity high.

Another key is where the light actually falls, which is why optical distribution is so important. Thanks to the OptiSuit portfolio of lenses, Maxos fusion promises a superior choice of 11 different optical distributions. These uniquely-designed lenses provide the right light precisely where required, while maintaining the highest quality and uniformity of light for a consistent look and feel.

In addition to creating attraction, providing guidance and maximizing clarity, OptiSuit lens plates are also designed to optimize the:

- sleek appearance of the fixture
- consistency of light color in all directions
- glare limitation
- accent factor
- beam characteristics

## Designed for modularity

What makes the OptiSuit portfolio unique is its revolutionary concept. A series of precisely-designed lenses deliver and direct the light in the most efficient way possible, while maintaining consistent qualitative color parameters. This optical portfolio is used as a building block to develop linear panels for trunk mounting, or non-linear panels for track mounting. That means OptiSuit offers lighting designers and engineers a diverse range of luminaires with the same advantages, to create bespoke solutions that fulfil the exact requirements of retail or industrial applications. For example, OptiSuit can be used to create a linear LED panel (Maxos fusion) of up to 2.3 meters in length. Or it can be used to create a rectangular panel (StoreSet) of $200 \mathrm{~mm} \times 600 \mathrm{~mm}$.

Optimized for a wide range of applications
The OptiSuit portfolio is suitable for a wide range of applications, from high bay and low bay areas, to small narrow corridors and large open spaces. Due to the unique shape of the lenses, the light emitted by each LED is transformed in such a way that, collectively, they provide high quality light that is directed for a specific purpose. For example, some OptiSuit optics are dedicated to back office and general lighting requirements. Others are especially designed for retail aisles, directing light to shelves and displays to attract more attention to the merchandise. And some are intended to optimize the routing of people and products in factory or warehouse environments.

## A choice of beam characteristics

In terms of lighting design, light distribution is just as important as visual comfort. With a portfolio of 10 wellbalanced beam options from extra narrow to very wide, OptiSuit can optimize the lighting in every application (see below). All beams are characterized by a very smooth, continuous beam shape, ensuring there are no visible luminance discontinuities on illuminated surfaces.

Looking for dedicated retail lighting? Maxos fusion with OptiSuit offers you a portfolio of seven different
light beams. Combined with a choice of lighting colors and lumen packages, this means you can specify Maxos fusion for virtually any and every retail aisle geometry.

## Introducing

## Maxos fusion XA

Energy consumption will always be a priority for commercial customers. Maxos fusion XA is an economical choice with very high efficacy as one of its many benefits. What's more, with lumen maintenance of 100,000 hours @L85, it offers even more possibilities to optimize your lighting design. Not only does the long lifetime enable better planning, but maintenance avoidance also contributes toward a more attractive total cost of ownership - a key consideration in both retail and industrial applications.

| Specifications |  |  |  |
| :---: | :---: | :---: | :---: |
| Electrical unit | Efficacy | Lumen maintenance ( 50 K hrs )* | Lumen maintenance (100K hrs) |
| LL512X and LL523X | up to $151 \mathrm{Im} / \mathrm{W}$ | L95 |  |
| LL512X HE and LL523X HE | up to $179 \mathrm{~lm} / \mathrm{W}$ | L95 | L85 |
| LL512X XA and LL523X XA | up to $185 \mathrm{Im} / \mathrm{W}$ | L95 | L85 |

* for the standard version LL523X LED160S - lumen depreciation @50k hrs is L80

# Bringing you benefits with our circular economy approach 

## What if...

#### Abstract

...we enable your luminaires to meet your evolving needs beyond their rated service life from start to finish - including service and repair, upgrades and replacements - while you

Because in a truly circular economy, everyone benefits - including our planet. And because our purpose is to unlock the extraordinary potential of light for brighter lives and a better world. With our circular approach, we source and use renewable materials in our luminaires and components, while reducing landfill waste. We join forces with our customers, offering energy-efficient luminaires with easy maintenance, repair, upgrades and replacement. Maintenance services are designed to be simple, fast and efficient, saving you time and money. And of course, we provide sophisticated technological upgrades, as and where needed to keep your lighting fit for purpose.

Our circular lighting solutions include innovative managed service models with end-of contract options, intelligent asset management systems and circular economy ready luminaires, guaranteeing optimal performance.We work with partners to ensure collection and recycling of end of-life components and luminaires. You benefit from immediate cost savings resulting from long-term functionality. Not to mention the least possible environmental impact.

Lifecycle assessments have been conducted

## We've designed luminaires for outdoor and indoor use with the circular economy in mind.

## Get ready to meet 5 vital benefits for our customers and our planet.

## Interact capabilities for retail applications

## Scene management

Interact Scene management allows you to create stunning and flexible retail spaces, using light to create a memorable shopping experience. With Interact Scene management you can easily adjust the lighting for different moments of the day, seasons and events to reinforce your brand, increase sales, or boost return visits.

## Indoor navigation

Interact Indoor navigation supports personalized, convenient shopping and new staff efficiencies with hyper-accurate indoor positioning powered by technology embedded in LED luminaires. When integrated into a retailer app, Interact Indoor positioning helps shoppers find products, take advantage of popup promotions, or even see recipe suggestions for the ingredients they are about to purchase. It can help staff when restocking shelves or fulfilling an online order.

## Multisite management

Interact Multisite management allows you to monitor and manage multiple stores and retail distribution centers remotely from a single dashboard. It gives insights into energy savings and lighting failures and allows managing lighting schedules and scenes for a chain of stores.

## Sensor units <br> Unlocking the potential of Maxos fusion with Interact

Bluetooth beacon

## LL500E

- A world of extra possibilities with in-pocket notifications
- Easily plugged into the backbone

## interact

# Bring your Maxos fusion to the next level with Interact 

All sensor ready Maxos fusion panels are compatible with Interact. Interact enables users to optimize efficiency, maximize energy savings and improve productivity and safety.

Interact connected lighting systems share data and integrate with your other smart industry solutions.

Interact connected lighting provides lighting
management and value-added applications through
insights and data. Centralized lighting management helps reduce operational costs, track compliance and plan maintenance efficiently.

## Sensor units

To maximize the potential of system connectivity, all sensor ready Maxos fusion panels are compatible with Interact.

Interact
LL500E H4
sensor unit

LL500E IA4 sensor unit

## System specifications

So how does it work in practice? The sensor is shown in green in the diagram below (LL500E H4). It communicates with multiple luminaires via the SR protocol, which is enabled throughout the Maxos fusion trunking.

You can divide the network into zones, grouping luminaires together so they act in exactly the same way. Groups of luminaires can also be defined and controlled by the Track-2-Track (T2T) connectors without a DALI interface (as included with the sensor unit).

One sensor can control up to four luminaires, which can be grouped in various ways. This enables you to customize the lighting in an area to create the right lighting scene for its specific use.

## 66

The great advantage of Maxos fusion lighting is not only good lighting quality, but more importantly, energy efficiency and cost effectiveness. In 2020 we are planning on opening over 40 stores in accordance with our 'Netto 3.0' concept using a range of Philips products."

Wojciech Wolny

Manager at Netto's Technical Department

## Netto 3.0

Netto 3.0 is the latest concept of Danish chain store Netto, which has had a presence in the Polish market for the past 24 years. With 380 locations, they are one of the biggest retail brands in Poland and more importantly; they offer a unique concept to their customers with -"Netto 3.0"-. Netto stores offer quality products according the latest trends, which come to life in the stores, using background music and the right lighting. The result: a successful and tailored customer experience, perfectly fitting the concept of the stores.

The basis for this lighting solution is a Maxos fusion trunking system that offers unmatched freedom and flexibility. The system comes with the option to integrate nonlinear StoreSet luminaires, linear Maxos fusion modules and StyleID Evo accent lighting. This is particularly important in commercial spaces that need to create attractive product displays to attract customers. The unique ambiance can be further enhanced using a variety of fixtures. Netto chose black trunking lines and fixtures for their stores to create the impression of an elegant interior.

With the Maxos fusion solution at Netto, modern and efficient LED technology is brought into all stores, delivering exactly the right amount of light where it's needed and reducing energy costs by over 50\% compared to solutions based on traditonal lamps.

## Customer stories Velleman

# 66 

> Not only us, but also our employees are very satisfied with the result. The excellent light makes a very positive contribution to our employees' productivity."

Bruno Loosveldt
Logistics manager Velleman

## Velleman

Velleman is a Belgian producer and distributor of electronics, operating from their $8,000 \mathrm{~m}^{2}$ warehouse in Gavere, Belgium. Here, the old gas discharge lamps were no longer adequate, so the aim was to replace them with a sustainable lighting solution. The aim was to increase light levels in the warehouse to improve visibility and create an attractive working environment, at the same time as delivering significant energy savings. After conducting a test with different providers, Velleman chose the Maxos fusion solution, in combination with GreenWarehouse.

The project was executed by EnergyVision (Ghent, Belgium), a specialist in energy efficiency. Some project numbers:

- 225 Maxos fusion light lines, extending to 1.1 kilometers.
- 3 times higher illuminance at floor level - from 50 lux to 170 lux - meeting international standards.
- 50\% energy savings compared to the original lighting installation, by installing LEDbased lighting.
- $20 \%$ extra energy savings by using sensors to switch off the lighting when no one is present.

# Range overview 

This diagram provides an overview of the components available for the Maxos fusion trunking system. The vertical columns refer to system configurations. The horizontal columns indicate the choice of specific types of components.

\end{tabular}
* Assumptions:
1. Line is assumed to be fully occupied only with Maxos fusion panels.
2. The starter kit for side entry (LL500Z \(2 x\) EP CU WH) is the default assumed feed in connection
3. The default MCB consideration is Type B 16A
4. The voltage drop from mains supply to beginning of light line is not considered
5. The voltage drop over the trunking should not exceed \(5 \%\).
6. The starter kit for mid entry (LL500Z CM) doubles the maximum trunking length
7. Ask the installer for advice when the trunking line exceeds 120 m ( \(\mathrm{B}-16 \mathrm{~A}\) ).
8. For additional configurations such as semi-continuous line, please contact your Philips representative.

\section*{IP54 configuration options.}

Please contact us for more information and alternatives.

\section*{Option 1}

This line starts with a linear panel IP54 and alternates with IP54 blind covers.
Trunking LL646T and LL623T can be combined in one line
