meeting spaces

Coworking spaces are pivoting to provide more COVID-proof private office space, as the industry predicts 15% of workers will continue remote work both at and closer to home after lockdown

50% of the workforce will likely be working across a Total Workplace Ecosystem balancing office, home and third places

The image is a screenshot of a BBC News article. At the top, there is a navigation bar with "BBC" and "Sign in" on the left, and "News", "Sport", "Reel", "Worklife", "Travel", "Future", and "More" on the right. Below this is a red "NEWS" banner with a menu of categories: "Home", "Video", "World", "UK", "Business", "Tech", "Science", "Stories", and "Entertainment & Arts". The "Business" category is selected. Below the banner, there are sub-categories: "Business", "Market Data", "Global Trade", "Companies", "Entrepreneurship", and "Technology of Business". The main headline of the article is "Barclays boss: Big offices 'may be a thing of the past'". Below the headline, there is a date "29 April 2020" and a small flag icon. To the right of the date are social media sharing icons for Facebook, Twitter, and Email, along with a "Share" button. Below the article content, there is a tag "Coronavirus pandemic".

The image is a screenshot of a social media post from SocialWorkplaces.com. The post is from a user named "SocialWorkplaces.com" who has 49 followers and posted 5 days ago. The text of the post says: "We expect 15% of remotely working employees to opt for coworking" Great conversation with Baptiste Broughton, co-founder of neo-nomade.com, in France, on how employers and employees are considering coworking ...see more. Below the text is a video player showing two men in a video call. The man on the left is wearing a headset. The man on the right is wearing glasses. The video player has a play button icon in the center. Below the video player, there is a caption: "We expect 15% of remotely working employees to opt for coworking" youtube.com.

The Future of Coworking In Hotels

Coworking– Where did it all begin?

- Coworking is not new
- Hotel lobbies were always a coworking space
- The need to ‘put in a full shift’ changed the game
- So much more than a shared office
- The digital and mobile first world has driven growth

Coworking – Who are Coworkers?

- The idea of coworkers as young digital nomads is outdated
- All business levels and industries, and all generations
- A workspace for all
- Demand is correspondingly now much closer to home

Coworking – What does Coworking Offer?

- All the same facilities as an office, but so much more besides
- Community is king
- Coworking & coliving have grown hand in hand
- A working, living and social experience across shared spaces

Coworking in Hotels – The Future

- Hotels already have the infrastructure, and the people
- Coliving = Hotel!
- Hotels Slow to implement
- The global hotel chains are waking up

Coworking in Hotels – All the Right Ingredients

- The key to monetizing coworking in a hotel lobby is by demonstrating value
- Hotels already have F&B, parking and people
- A package could include desk space, free parking, tea/coffee, power points, social events and a member directory
- But hotel lobbies aren't always famous for great Wi-Fi...

Trulifi

Hotel Wi-Fi is expected and essential for most guests, but bad experiences are common

65%

of guests are online within seven minutes of checking in

Roomzzz guest survey 2016

x3

the number of devices guests check-in, incl PlayStation and Xbox

Telkonet IOT Whitepaper

81%

of guests have experienced poor hotel Wi-Fi in the past 12 months

Hotelwifi.com Whitepaper

67%

of business guests don't return if they experience inadequate wifi

Netgear WiFi survey Q4 2018

Poor hotel Wi-Fi = no 5-star review

Hospitality Insights Programme

From Jan-April 2020 we partnered with the Hotel Management School Maastricht to learn about connectivity needs in hotels, and how LiFi helps.

Who we talked to

Hoteliers

12 interviews, F2F and online

Business Guests

2 group discussions, 10 people

50 1-2-1 interviews, online

214 respondents, LinkedIn Survey

System Integrators & IT Providers

8 interviews, F2F and online

Key learnings

Business Guests Have Outgrown Hotel Wi-Fi

Business guests rely heavily on the hotel network to perform business-critical work. The use of more cloud systems and tools place increasing pressure on hotel Wi-Fi and both guests and hoteliers have experienced that it's not always up to the job.

Security Is Crucial But Currently Overlooked

While almost all hotels offer an open unsecured network, around 50% of guests treat it like they do at home, and believe the hotel is responsible for keeping them safe online! The other 50% employ a range of security tools that frequently impede access and use – it's not a great experience for either group.

Good Connectivity Drives Loyalty

Loyalty is a serious business for hotels, with a returning guest delivering 30+% more revenue than a new one. Wi-Fi is the no. 1 service they demand, and while they are unlikely to remark if it's working well, a bad experience stops the majority of guests from returning.

What guests want from hotel Wi-Fi

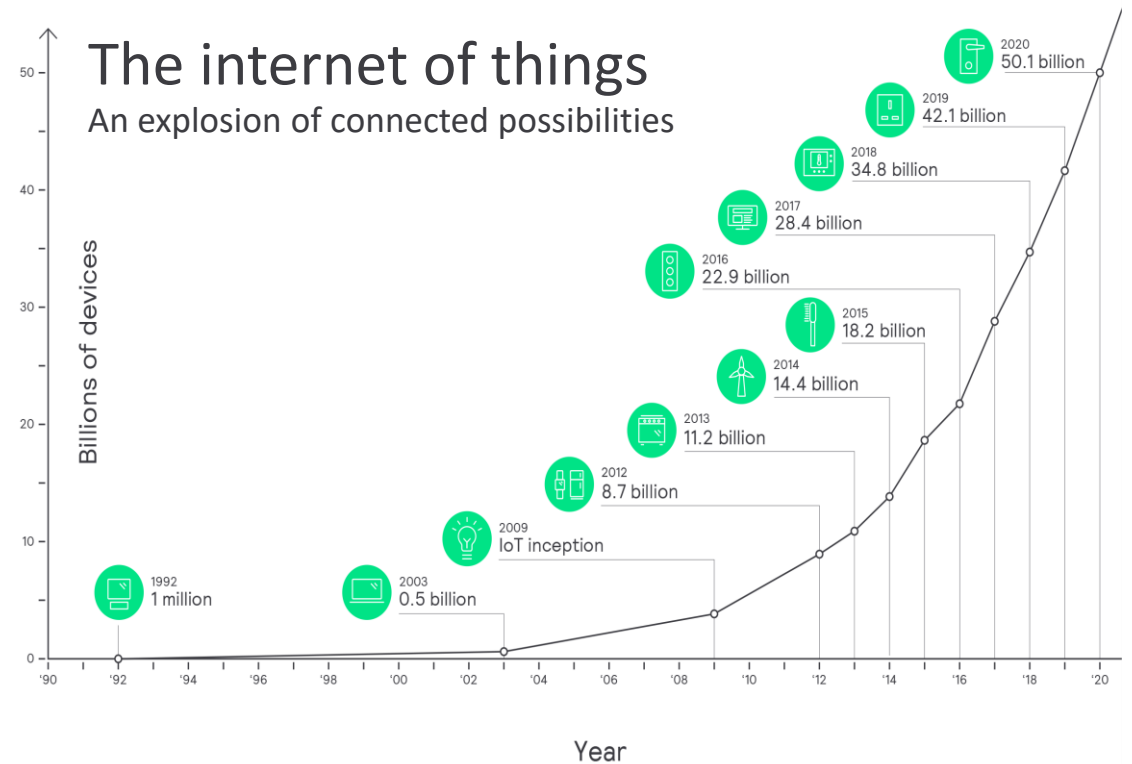

We're using more and more data...

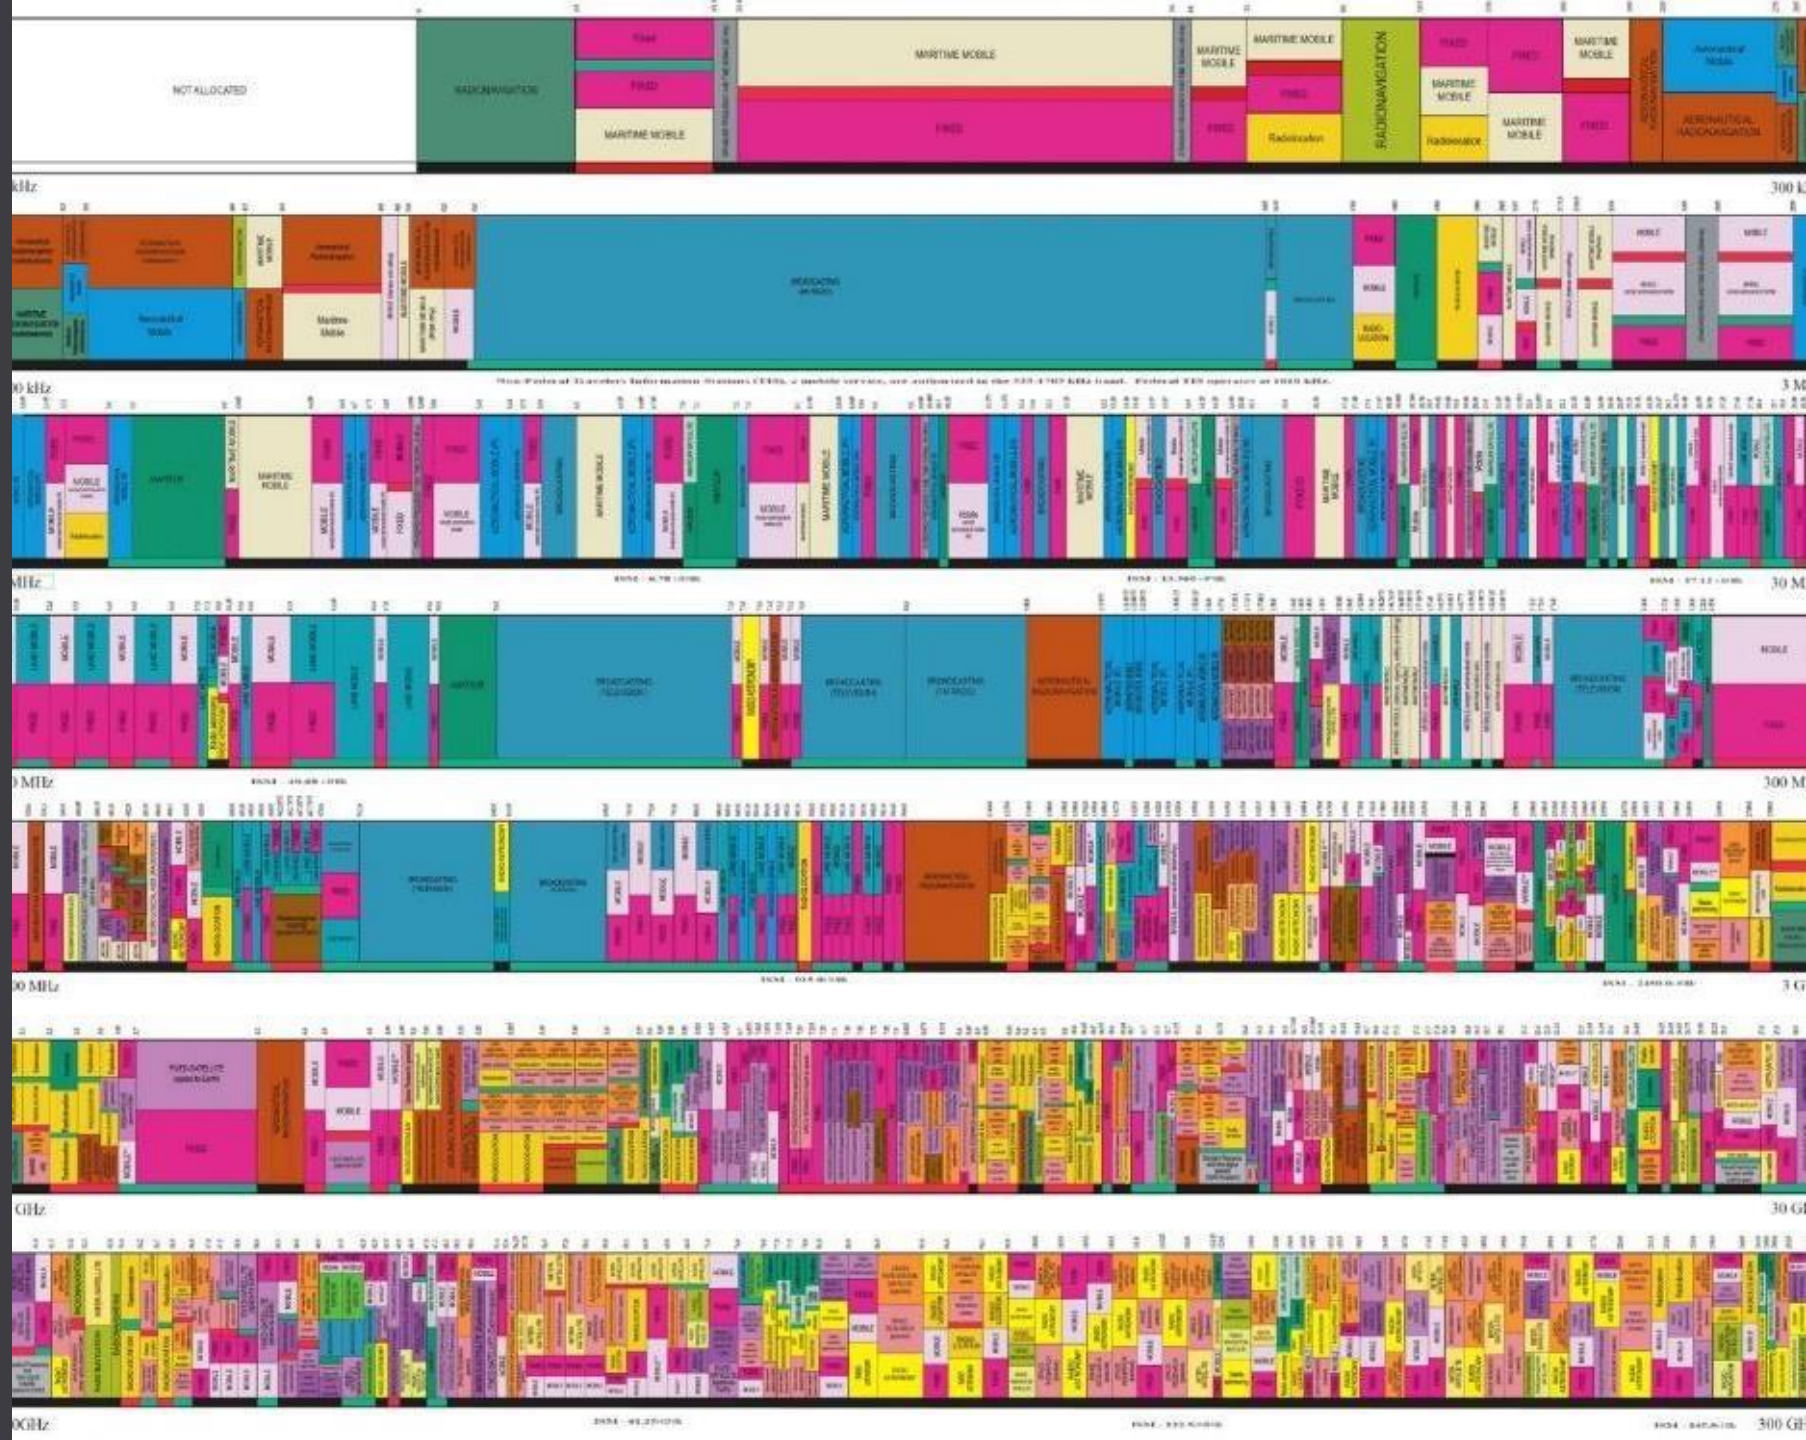

.. and more and more devices are connecting

In hotels this is driven both by new digital infrastructure as well as guest tech.

The radio spectrum does not provide enough room to grow.

This manifests in reduced stability, ineffective wireless coverage and slower throughput, frustrating guest needs and expectations.

Unreliable networks are costing patience, loyalty, and ultimately \$\$\$.

Electromagnetic interference can be caused by everyday equipment, building infrastructure and of course, all the other Wi-Fi signals in the hotel.

There is growing concern about security over radio communication.

Radio provides a blanket cover, under which anyone can sneak – unsecured or 'open' Wi-Fi in hotels is an eavesdropper's paradise.

LiFi is uniquely positioned in the landscape of sole radio solutions – Trulifi delivers a vast and interference-free channel for your guests

LiFi meets hotel guest needs perfectly

200 Mbps
Plug & play
Ultra low latency
Offloads Wi-Fi

**Intuitive
access to a
fast
network**

**Wireless
connection!**

**Data
security you
can trust**

Strictly defined area
Doesn't travel through walls
128 bits encryption
Designated access keys

Highly stable data rate
No interference from
infrastructure, equipment
or neighboring Wi-Fi
Causes no interference

**Reliable – it
just works**

Trulifi 6002 System

- Infrared - works with the lights on, dimmed and off
- **Net speed 200 Mbps / 140 Mbps**
- Coverage 2.4m diameter (depending on ceiling height)
- **Branded USB access key** connection
- Chip based on ITU 9991/G.vlc standard
- **128-bit AES CCMP Encryption**
- Windows and MacOS compatible
- Install with ceiling holder or a choice of luminaires

A turnkey Trulifi solution to unlock new revenue streams

- A fully OPEX model - no up-front investment
- Signify installs and manages the hotel LiFi
- The hotel manages guest access and billing e.g.
 - Pay per use, or
 - Included in coworking package, or
 - Included in LiFi guest room rate
- Guest logs into LiFi network
- Network usage data is shared with both parties
- The hotel pays Signify a % of generated revenue
