

Configuration tooling

MultiOne USB2DALI tool

Today's manufacturers are able to offer perfectly tailored lighting solutions that are intelligent and can also be adapted to tomorrow's needs.

Configurable devices (drivers, sensors) with built-in control functions allow configuration of the luminaire's behavior in order to maximize energy savings and minimize environmental impact. MultiOne is the intuitive system allowing users to configure all the different functions in every configurable device from Philips or Advance.

Depending on the Technology a different interface must be used: DALI, NFC (SimpleSet), Zigbee.

With this tool you can configurate, control, query, commission single or multiple devices.
