

Berlin High School

Berlin, Connecticut,
United States

School-wide

This Interact Pro Scalable project replaced existing HOT5 and T8 fixtures with Daybrite FGG, FSW and FBY Interact fixtures. The lighting is installed across 75 classrooms, two gymnasiums, music rooms, and various other supporting rooms, and benefit over 1,000 students.

A scalable platform

By installing fixtures with the Interact Pro Scalable Platform we were able to design networks and zones to maximize energy usage and motion by using the natural separations of the building. Daylight harvesting zones were also set up in each classroom where applicable.
