

# BMW Communications Center

Shenyang, China

## Showing culture

BMW Communication Center, the main office building of BMW Brilliance's third factory, is made up of an office and three major workshop hubs, and plays an important role in displaying BMW culture.

## Human-centric

The application of 60m<sup>2</sup> Color Kinetics Onespace G2 luminaires offers the building abundant, bright and glare-free lighting. The tunable white function helps the owner easily adjust lighting to employees' exact needs throughout the day, achieving human-centric lighting in the communication center.

These were **challenging projects**, but with Signify's support we managed to achieve **great results**. Skopje opened the door for Interact implementation in North Macedonia, and Gazi Baba is **the first municipality with a complete Interact interface.**"
