# Highlights

#### **Carbon footprint**

Energy savers reduce the amount of energy in your home, which not only results in a lower energy bill, but also in less carbon (CO2) output by your energy supplier. Together we make this a better world to live in.

### **Energy efficient**

All Philips energy savers save energy from the moment you turn the switch. During their lifetime they use fewer kW and thus also result in a lower energy bill. The level of energy saving differs per lamp type and technology.

#### Compact size and high perform

Our smallest energy saving lamps are just as small as a traditional light bulb. You can now save energy and money in all your lights and lamps, without compromising on light quality.

#### **Extra brightness**

Brighter usually means more power, and a brighter life comes at a price. Philips energy- saving lamps give you more light without requiring more power.
